

## **Issue with MERRA2 data from September 2020 - action is recommended!**

Dear windPRO online-data user

NASA has notified us about an issue with the September 2020 release of the MERRA2 data. This data was released from NASA on October 20<sup>th</sup>, 2020 and added for distribution in windPRO on October 24<sup>th</sup>, 2020.

*The MERRA2 science team at NASA does not recommend using these September 2020 data - and is currently reprocessing the data.*

MERRA2 data from September 2020 has now been removed from the windPRO online-data services. For users who have downloaded MERRA2 data in the period between October 24<sup>th</sup> and November 3<sup>rd</sup>, we recommend that you consider taking the following actions with your windPRO project:

- Remove the MERRA2-data for the month of September 2020
- Redo any calculations or reports where you have used these September 2020 records

The actual nature of the issue is unknown to the windPRO online-data team. We will send out a new notification when new MERRA2 data for September 2020 has become available from NASA sources. A little more information is available at the windPRO wiki: [here](#).

Best regards,  
The windPRO online data team
